Unit FM4.17: Understanding property, fabric and building services maintenance for facilities managers

The assessment criteria form part of the unit and specify the standard that a learner is expected to meet to demonstrate that the learning outcomes within the unit have been achieved. The additional guidance, which is shown in brackets and italics alongside the assessment criteria, does not technically form part of the unit, in that it is not included in the reference version of the unit shown by the Register of Regulated Qualifications. The additional guidance is provided to illustrate how the assessment criteria might be interpreted. The BIFM will generally expect assessors to interpret the assessment criteria as described, or to an equivalent level of demand.

Aim of the unit:

This unit enables learners to develop their understanding of the range of strategies used in the delivery of effective property and building services maintenance in a variety of Facility Management contexts and the scope of management systems and technologies available.

Title:	Understanding property, fabric and building services			
	maintenance for facilities managers			
Level:	4			
Credit value:	8	8		
		Assessment criteria		
Learning outcomes				
A learner when awarded gradit for		Assessment of this learning outcome will		
A learner when awarded credit for this unit will:		require a learner to demonstrate that they can:		
cins aime wiiii		carr.		
1. Understand building design		 1.1 Explain the range of building types and their uses (supporting the explanation with examples (e.g. commercial, educational, industrial) rather than trying to provide an exhaustive list) 1.2 Explain how particular building types 		
		may be used to best advantage (supporting the explanation with examples of different types suited to different requirements, such as requirements relating to location, use of space, climate, environment, etc.)		
		1.3 Explain the advantages and disadvantages of different building structures (relating performance		

characteristics (e.g. structural strength, resistance to weather) to different types of structure (e.g. load bearing masonry, timber frame and steel frame constructions, cladding systems) 2. Understand the maintenance 2.1 Explain the fabric maintenance implications of differing building implications of building, fabric, structures and components structures and components (including load bearing masonry, timber frame and steel frame constructions, cladding systems and the use of steel, brick, concrete, wood, glass) 2.2. Explain the benefits and drawbacks of the various structures and components used in old and new buildings (including the relative cost and complexity of maintenance, environmental performance and presence of hazardous materials, e.g. asbestos) 3. Understand how a strategy for 3.1 Describe the range of maintenance the maintenance of the strategies that can keep buildings safe, building fabric can be useable and help to retain value implemented (including periodic, reactive and preventative maintenance, and conditioned-based and risk-based maintenance) 3.2 Explain the advantages and disadvantages of various ways of delivering fabric maintenance services (supporting the explanation with example/s from the learner's own experience and/or case studies, and including comparison of in-house versus outsourced resource models) 3.3 Explain how to implement and monitor a building fabric maintenance programme (including condition surveys and forward maintenance plans)

	3.4 Explain with examples when it may be necessary to involve other specialists (using example/s from the learner's own experience and/or case studies)
Understand the elements of building services maintenance programmes	4.1 Explain the range of building services which could be incorporated into differing types of building structures (including utilities (electricity, gas, water), sewage, heating and ventilation, communications (telephone and data))
	4.2 Describe the constituent parts of a building services maintenance programme (including analysis of risk, maintenance plan, tracking process, safe systems of work, record keeping, compliance, monitoring and reporting processes for mechanical, electrical, HVAC and lift maintenance)
	4.3 Explain the factors to be considered in developing a building services programme (supporting the explanation with example/s from the learner's own experience or case studies that illustrate challenges from requirements and for implementation)
	4.4 Explain the advantages and disadvantages of various ways of delivering buildings services maintenance (including reactive and planned/preventative maintenance and in-house versus outsourced service delivery)
	4.5 Explain how to implement and monitor a building services maintenance programme (including condition surveys and forward maintenance plans)
5. Understand how to manage staff, contractors and specialists	5.1 Explain how to manage staff, contractors and specialists to ensure the required level of service is delivered (providing an

	overview of approptechniques)	oriate management	
6. Understand building management systems (BMS) and technology used to control or manage building services	6.1 Explain the scope and use of buildings management systems (from basic systems of data capture to integrated systems that allow remote monitoring, diagnosis and service engineer call-out)		
	6.2 Explain what other technologies can be used in controlling or managing building services (supporting the explanation of examples, such as access control, time management systems, CCTV, equipment performance monitors, energy consumption monitors).		
	6.3 Explain how BMS can be used to help deliver sustainability in facilities management (no additional guidance)
